- *Are these expensive?*
- *Are these good areas?*
- *Can I find better deals?*
- *Kromme Leimuiderstraat!?*

# Really...

Hi,

Thank you for the interest shown in our offer.

We request that you fill in the below "get to know you questions" and send this per email to [REDACTED]

-

- What is your current occupation?
- What is your study background?
- What is your age?
- What is your family situation?
- What is your nationality?
- What is your income (net)?
- What is your contract situation?
- What is the reason for looking a rental property?
- What is your current adress?
- Do you have any pets?
- Do you smoke?
- When would you like to rent?
- For how long do you intent to rent?
- Do you give permission to share the above information, if applicable, with the landlord?
- What is your phone number?

---

**Guess what... there's a solution!**

---

# Fundamental Analysis

**Fundamental analysis** is a method of evaluating a security in an attempt to assess its intrinsic value, by examining related economic, financial, and other qualitative and quantitative factors.

- Return on Equity
- Price to Earnings
- Price to Equity
- Compare with other companies within the sector
- Find out if asset is *overvalued* or *undervalued*

---

# Fundamental Analysis Applied to Real Estate

Intrinsic and extrinsic parameters

- Apartment size
- Number of kamers
- Neighborhood
- Price per square meter
- Price comparison with other apartments in the neighborhood

---

# The smart way

---

**So... where do we start?**

---

# So... where do we start?

## Ask questions!

---

# Ask Questions...

- How prices are distributed?
- Which are the hottest areas?
- Where to start hunting?
- How to find a good deal?

# Which tools?

---

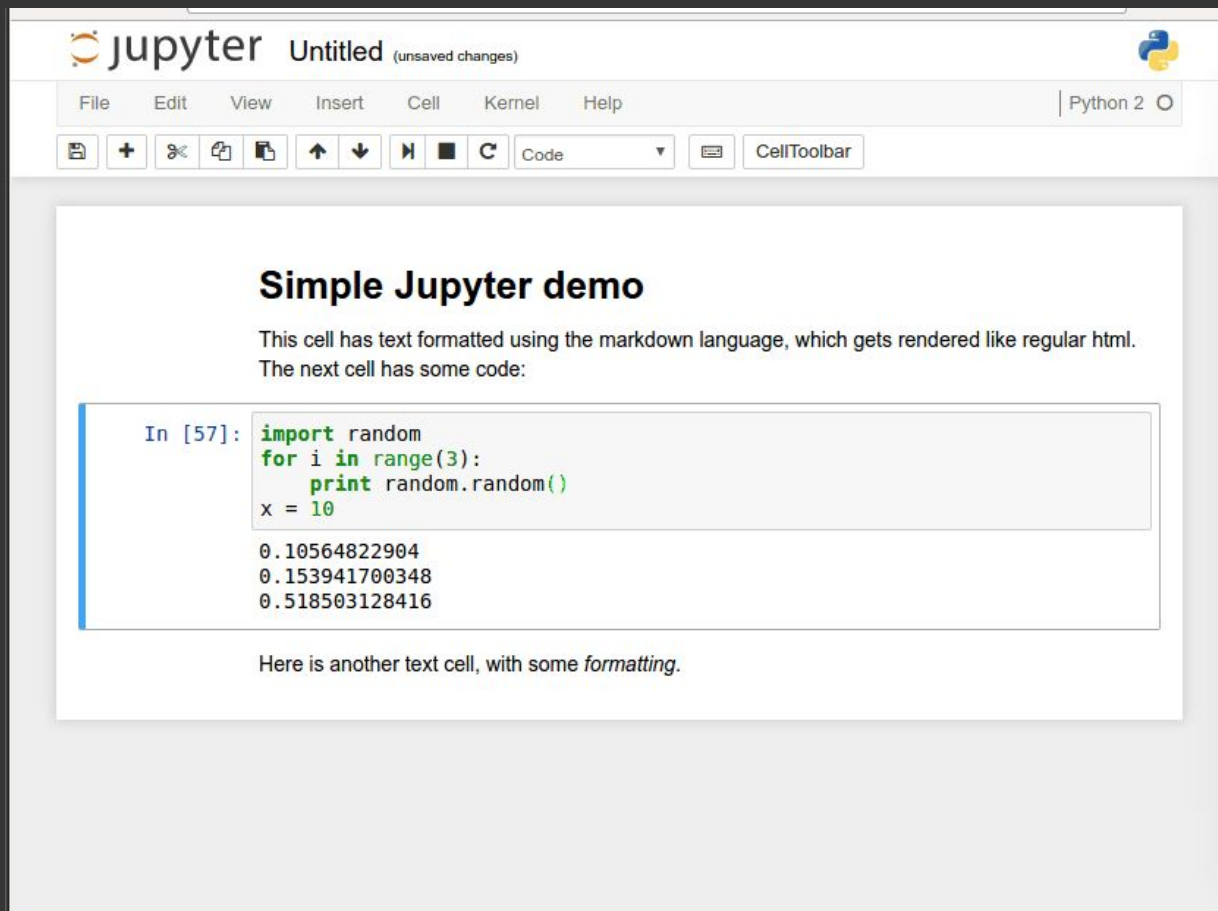

# Why Jupyter?

# This...

The screenshot displays the Wing IDE interface with the following components:

- Code Editor:** Shows the `__CB_PageChanged` method in `CNotebookContainer`. The method calls `self._fGtkSplitWidgets[split].return split_w.get_children()[0]` and includes a `def __CB_PageChangedAfter` method. A red highlight is on the line `page = self._GetPanelInNotebook(notebook2, pos)`.
- Project Explorer:** Lists the project structure for `ide-7.0s.wpr`, including folders like `diff`, `docutils`, `edit`, `external`, `guimgr`, `guiutils`, `pysidescintilla`, `scintillaedit`, `test`, `WGuiCpplmpl`, `colorutils.py`, `combo.py`, `combo_qt4.py`, and `dialogs.py`.
- Warnings Panel:** Displays a list of warnings, including `PyLint: Unused import itertools`, `W602 deprecated form of raising e`, `PyLint: Parameters differ from overridden`, and `PyLint: Dangerous default value [] as argu`.
- Completion Popup:** A context menu is open over the `notebook._fEventFilter.CU` code, showing options like `Clear`, `connectNotify`, `customEvent`, `deleteLater`, `destroyed`, `disconnect`, `disconnectNotify`, and `dumpObjectInfo`.
- Source Assistant:** Shows the `Completion: notebook._fEventFilter.Clear` method, its `Runtime type: callable method`, and a description: "Clear attributes but don't disconnect from the wrapper. Used when object is destroyed to minimize cycles left around". It also shows the `Current Value: <bound method`.

# Versus this...

The screenshot displays the Jupyter Notebook web interface. At the top, the title bar shows 'jupyter' with its logo, 'Untitled (unsaved changes)', and the Python logo. Below this is a menu bar with 'File', 'Edit', 'View', 'Insert', 'Cell', 'Kernel', and 'Help'. To the right of the menu bar is a 'Python 2' indicator. Below the menu bar is a toolbar with icons for saving, adding cells, zooming, copying, pasting, undo, redo, and a dropdown menu currently set to 'Code'. To the right of the toolbar is a 'CellToolbar' button. The main content area contains a text cell with the heading 'Simple Jupyter demo' and two paragraphs of text. Below the text is a code cell containing Python code that imports the 'random' module, loops three times to print random numbers, and assigns the value 10 to variable 'x'. The output of the code cell shows three random numbers. Below the code cell is another text cell with a single line of text.

jupyter Untitled (unsaved changes) Python 2

File Edit View Insert Cell Kernel Help

Code CellToolbar

## Simple Jupyter demo

This cell has text formatted using the markdown language, which gets rendered like regular html.  
The next cell has some code:

```
In [57]: import random
for i in range(3):
    print random.random()
x = 10
```

0.10564822904  
0.153941700348  
0.518503128416

Here is another text cell, with some *formatting*.

# Jupyter

- Literate Programming (Knuth)
- Interactive Paradigm
- Fast feedback makes it great for bootstrapping, experimenting, prototyping ideas and visualizing data

---

# Some bonuses...

# PyViz

- Makes data visualization easier, powerful and interactive
- Core libraries: **Panel**, **hvPlot**, **HoloViews** and **GeoViews**
- Support for **Bokeh**, **matplotlib** and **Datashader**

# iPython Widgets

- Makes Jupyter even more interactive
- More control over data
- Support for **sliders, toggle buttons, progress bars...**

A white circle containing the text "IP[y]:". The "IP" is in black, the "[y]" is in blue, and the colon is in black. The background of the slide features a dark, grayscale image of a row of European-style buildings with many windows, reflected in water.

IP[y]:

# Versus this...

---

# Micro x Macro

# How are prices distributed?

- Prices are concentrated between EUR 1500 and 2000
- Really difficult to find a place for less than EUR 1500!

# Which are the hottest areas?

- Each circle represents an apartment
- Apartment area is represented by circle radius
- Green or red depending on price per square meter

# Where to start hunting?

- Centrum has the highest median prices
- Nieuw-West and Zuidoost have the lowest median prices

---

**Which is better to make a  
decision?**

**Micro x Macro?**

---

# What about the surroundings?

- Cafes
- Bars
- Parks
- Transportation
- Schools
